PROFILE Self-taught frontend developer and founder of **Nara** — a commercial SaaS platform I built and shipped end to end with **React.js, Next.js and TypeScript**, using an **AI-assisted development workflow (Claude Code)**. I have learned by shipping software real businesses depend on, and I now want to do that inside a professional team, with a mentor, on projects bigger than my own. Available full-time.

TECHNICAL	Frontend	React.js, Next.js, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS
	Workflow	Git, REST API integration, Figma, responsive & multi-language UI, debugging
	AI tools	Claude Code, ChatGPT — daily use for building, debugging and reviewing code

- EXPERIENCE**

Founder & Frontend Developer — Nara

Mar 2025 — Present

White-label subscription platform for meal-prep and catering businesses · nara.az

 - Built the customer-facing frontend in **React.js, Next.js, TypeScript and Tailwind CSS**: an admin dashboard for business owners, a branded customer portal, and a Telegram Mini App ordering flow.
 - Integrated the frontend with **backend REST APIs** for subscriptions, deliveries and payments; built the analytics dashboard (revenue, active subscribers, churn) and Excel export on top of them.
 - Implemented **per-tenant theming** — each business gets its own logo, colours and custom domain from a single codebase — plus responsive layouts and a **trilingual UI** (Azerbaijani, Russian, English).
 - Work in an **AI-assisted workflow with Claude Code** end to end — scaffolding features, debugging, refactoring and reviewing my own code — and use **Git** for version control throughout.
 - Run the full feedback loop with live customers: reproduce the reported problem, fix the bug or redesign the interface, ship, and follow up until it works for them.

EDUCATION

MSc, Hydrogeology of Mineral Deposits and Engineering Geology

Baku State University · 2026 — Present

BSc, Geology & Geophysical Engineering — English sector

Baku State University · 2022 — 2026 · taught and assessed entirely in English
