PROFILE Self-taught frontend developer and founder of **Nara** — a commercial SaaS platform I built and shipped end to end with **React.js, Next.js and TypeScript**, using an **AI-assisted development workflow (Claude Code)**. I have learned by shipping software real businesses depend on, and I now want to do that inside a professional team, with a mentor, on projects bigger than my own. Available full-time.

TECHNICAL	Frontend	React.js, Next.js, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS
	Mobile	Flutter, Dart — iOS and Android from one codebase
	Workflow	Git, REST API integration, Figma, responsive & multi-language UI, debugging
	AI tools	Claude Code, ChatGPT — daily use for building, debugging and reviewing code

- EXPERIENCE** **Founder & Frontend Developer — Nara** 2026 — Present
- White-label subscription platform for meal-prep and catering businesses · nara.az
- Built the frontend in **React.js, Next.js, TypeScript and Tailwind CSS**: the operator dashboard for business owners and a branded customer storefront, live at app.nara.az.
 - Built the companion **iOS and Android app in Flutter** from a single codebase — menu browsing, subscription management and delivery tracking.
 - Integrated the frontend with **backend REST APIs** for subscriptions, deliveries and payments; built the analytics dashboard (revenue, active subscribers, churn) and Excel export on top of them.
 - Implemented **per-tenant theming** — each business gets its own logo, colours and custom domain from a single codebase — plus responsive layouts and a **trilingual UI** (Azerbaijani, Russian, English).
 - Work in an **AI-assisted workflow with Claude Code** end to end — scaffolding features, debugging, refactoring and reviewing my own code — and use **Git** for version control throughout.
 - Run the full feedback loop with live customers: reproduce the reported problem, fix the bug or redesign the interface, ship, and follow up until it works for them.

ALSO BUILT Websites for cafés, tour operators and food businesses across Baku, built in React and Next.js and delivered to client deadlines — the work that taught me to ship on someone else's schedule rather than my own.

EDUCATION **MSc, Hydrogeology of Mineral Deposits and Engineering Geology**
Baku State University · 2026 — Present

BSc, Geology & Geophysical Engineering — English sector
Baku State University · 2022 — 2026 · taught and assessed entirely in English

LANGUAGES Azerbaijani — Native | Russian — C2 | English — B2, full Bachelor's degree completed in the English sector | Turkish — B2
